

Nimbus

A cloud hosted database for fire alarm systems

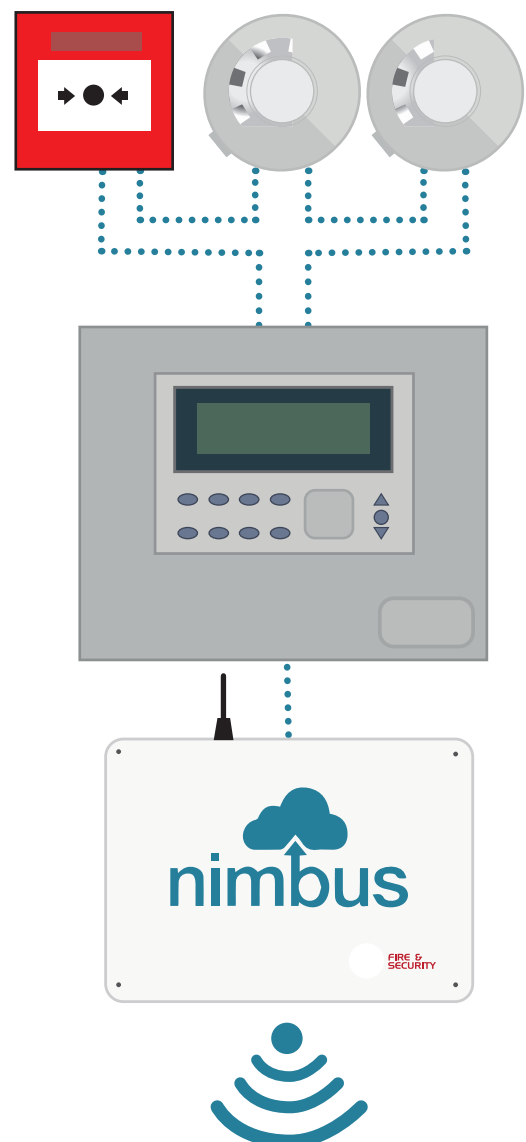

Nimbus is an innovative fire alarm management system providing control and monitoring wherever you are. Facilitated by a non-intrusive add-on to a fire alarm control panel, Nimbus securely and instantly communicates all activity to a cloud hosted database. Users can access Nimbus from any location using a desktop PC or mobile internet connection.

Problem

A traditional paper-based fire-alarm management system that is prone to user error, lost or fragmented data, and inconsistent processes – all making it increasingly difficult to meet audit and compliance obligations.

Solution

A cloud-based management system that is easy to connect, simple to operate, and ensures a consistent approach to control and monitoring through automation and centralised data storage. No additional overhead to meet compliance obligations.

Easy to install and use

- No specialist technical knowledge required.
- Simple to connect and compatible with most fire alarm control panels.
- Data can be accessed from any desktop or mobile device.

Secure and centralised data storage

- Test data is instantly uploaded to cloud database so no need to transport paper logs or bulky hardware.
- Cloud database provides secure backup and disaster recovery.
- Easily scalable with no limit to log and database size.

Low cost of ownership

- No requirement for expensive computer hardware and support contracts.
- Predictable monthly costs.
- Reduced risk of data loss and compliance overheads.

Better quality data through automation

- Automation of routine tasks allows consistent and repeatable testing over time.
- Removes human error and makes staff more effective and productive.
- Standard log data can be supplemented with photos and notes.

Compliance and Audit

- All data stored securely in one database giving you an instant and complete view for reporting and audit.
- Connection to Nimbus is non-intrusive and has no effect on the fire alarm or conformity to the required standards.
- Helps you meet your compliance obligations with no additional cost or effort.

Our services include:

FIRE

We design, supply, install and maintain reliable and effective fire detection and life safety systems for commercial and industrial premises.

SECURITY

We design, supply, and install security systems including intruder alarms, CCTV and access control.

MAINTENANCE & SERVICING

We offer a comprehensive range of planned and reactive maintenance services, with contracts that can be tailored to suit your needs.
